### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The prior art (including Nardella and Sherman) neglects to disclose or suggest an ablation system with circuitry that permits termination of energy application through an electrode in response to a sensed impedance plateau. An impedance plateau is defined in the claims as a maximum acceptable rate of change of impedance measurements over a defined period of time. For example, the user would determine that a change of measured impedance of 1 impedance unit per 1 time unit is the maximum rate of change to terminate energy application through the electrode. Anything less than 1 measured impedance unit per 1 time unit would result in the termination of energy application through the electrode. More than 1 measured impedance unit per 1 time unit would result in a continued energy application through the electrode in the ablation system. If the targeted tissue impedance is changing over time above a predetermined amount, then energy is applied. If the impedance is not changing over time above a predetermined amount then energy application is terminated. Circuitry in the prior art does not anticipate or make obvious this arrangement.

Claims 1-4, 7-10, 13-18, 21-22 allowed. Claims 1 and 15 are independent.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
